

[About us](#)

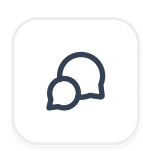

Tally Group

Tally is a world-leading cloud-native software platform and ecosystem enabling decarbonisation, digitisation and decentralisation for energy retailers globally. Tally has proven Australian energy market expertise and deep understanding of the energy landscape from more than 25 years market experience

Revolutionizing Energy

Energizing Innovation in Utility Technology and Energy Retail Operations

Revolutionizing Energy Solutions

At Tally Group, we put our energy into building world-leading utility technology. We're transforming how people power their homes and businesses by reinventing how energy retailers operate.

Cloud-Native SaaS Provider

As a cloud-native SaaS provider with extensive experience and clients worldwide, we're well-placed to help businesses thrive in a rapidly changing market.

Empowering Customers Globally

We offer a comprehensive suite of innovative billing, digital and analytics solutions designed to meet globally diverse market and regulatory requirements, empower customers and reduce cost-to-serve.

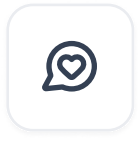

Innovation in Changing Landscapes

We're committed to innovating in a competitive landscape amidst climate change, grid transformation, and new technologies despite constraints from legacy tech and lackluster service.

Uniting Energy Solutions Worldwide

Tally Group formed in 2021, following the merger of leading cloud-based billing solutions provider Agility CIS and fast-growing energy retail SaaS software provider Tally. The Tally Group includes Znalytics (US/Japan) and Webtools Energy (Australia and New Zealand), which were both acquired by Agility CIS in 2020. In May 2022, we rebranded globally as Tally Group.

Global Reach and Impact

We combine global outlook with local focus, and our team operates from locations in Australia, New Zealand, Japan, India, Dubai and the United States. Tally Group is led by chief executive Andrew Duncan, who is supported by a comprehensive and experienced board comprised of Tally Group's global sponsors.

Unparalleled breadth of experience

They make the complex simple and helped us achieve better business outcomes

David Hayes
CEO, Next Business Energy

Our commitment to utilities

- ✓ Accurate, scalable billing
- ✓ Reduced cost to serve
- ✓ Fast, cost-effective innovation
- ✓ Trusted implementation partner
- ✓ Reduced churn, better engagement
- ✓ Best practice in data and tech

Our commitment to our people

- ✓ Work at the forefront of utility tech
- ✓ Global locations
- ✓ Proven career pathways
- ✓ Tailored learning and development
- ✓ Flexible working
- ✓ Competitive salaries

Our commitment to consumers

- ✓ Personalised experience
- ✓ Straightforward communications
- ✓ Multi-channel support
- ✓ Digital-first strategy
- ✓ Simplify market participation
- ✓ Build trust with utility providers

Tally Group

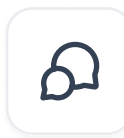

Careers

Join our team and be part of a dynamic and innovative environment where your skills and talents can flourish. At Tally Group, we are committed to fostering growth and development for our employees. Explore exciting opportunities in software development, data science, operations, business analysis, and more. Join us in driving meaningful change and making a positive impact in the world.

Make a real impact

We offer a comprehensive suite of innovative billing, digital and analytics solutions designed to meet globally diverse market and regulatory requirements, empower customers and reduce cost-to-serve.

Who we are

We're a global business with 300+ high-performing people working in Australia, New Zealand, India, Japan, Dubai and the US. Our team members come from many different backgrounds and everyone brings a unique set of skills and experiences to the table. We're committed to building an inclusive culture that drives innovation and celebrates all our people and their talents.

Our vision and values

We believe in building better technology that benefits people and the planet. We want to be the platform that transforms the global energy industry. We're guided by our shared values: Quality, Integrity, Collaboration and Ownership. We take our work seriously, rather than ourselves. Working at Tally Group means having the chance to make a tangible contribution to our shared goals.

Grow with us

Our people power real change in the world and working with us means using your skills to have a positive impact. If you're keen to work on ground-breaking projects that change the way people use and access energy every day, we've got plenty of opportunities for talented people with experience in software development and operations, data science, business analysis and more. We offer a supportive and flexible environment where you'll be able to grow and achieve your personal career goals.

Disruption is the new normal

What's in store for the energy sector in 2023 - and beyond?

What's In Store For The Energy Sector In 2023 - And Beyond?

In 2022, the world found itself in the midst of a global energy crisis spurred on by war in Ukraine and increasingly frequent and severe climate events.

In many places, the situation looked dire. In the UK, [electricity prices rose by 65.5%](#) and gas prices by 128.9% in the 12 months to November 2022. Many European countries feared a colder-than-usual winter combined with the absence of Russian gas supply could further exacerbate an already struggling energy ecosystem. Add the lingering shadows of Covid-19 and its variants and it's not surprising that few feel optimistic about what 2023 may bring.

Let's take a look at what energy sector changemakers will be focusing on this year.

Domestic energy resiliency

In the face of volatile market behaviour, countries will increasingly focus on bolstering energy resiliency within their own borders. Across Europe, policy has been used to manage the demand/supply imbalance, including managing street lights and illuminated signage. The UK and Poland have introduced financial incentives for consumers in a bid to save energy.

In 2023, the focus must turn to long-term grid resiliency solutions, such as domestic renewable energy generation and bolstering national grid efficiency. [According to the Australian Energy Market Operator's Step Change scenario](#), improved grid efficiency may not only result in greater energy security, but also a reduction in electricity pricing by as much as 30-40%.

Distributed Energy Resources (DERs), combined with decentralised storage and AI offer a multi-beneficial way to achieve this. The groundwork has already been laid, but we can expect increased heavy investment in this technology. In time, decentralised energy systems will become an indispensable part of the grid.

Prosumer tech

The mass rollout of prosumer technology, such as home solar generation and battery storage, is one gateway to making DERs a reality.

Prosumer technology is quickly becoming more efficient and less costly, and improvements in AI are making the benefits more real for consumers. We're moving toward a world where connected tech will enable peer-to-peer microgrids and energy trading. AI will accelerate efforts to serve smart cities with this technology, going so far as to offer two-way charging stations via electric vehicles. As partners in the energy transition, consumers and policymakers alike will be interested not only in energy security within national borders, but also within the home.

Shift to renewables

The northern hemisphere droughts, heatwaves and war in Ukraine forced countries to revert to coal and nuclear-fired generation in 2022 to meet demand. While Germany delayed its planned closure of nuclear plants in 2022 in the face of energy security challenges, while Japan is planning to restart seven nuclear power plants in 2023. With meteorologists predicting a rare third consecutive year of La Niña weather patterns in 2023, we should expect more of the same.

In spite of these short-term measures to meet sudden and critical demand, renewables are on the rise. Global solar capacity is expected to [surpass a terawatt of power generation](#) in 2023. According to the International Energy Agency, 33% of global electricity is forecast to be renewable by 2024, with solar accounting for almost 60%. As this technology develops, it's becoming more efficient and cost-effective - the reduction in the cost of solar is expected to retain its downward trajectory, having [reduced by 85% in the past decade](#).

[Green hydrogen is also on the horizon](#), predicted to be worth \$201 billion by 2025, up from \$130 billion in 2020. [The global green hydrogen pipeline](#) currently exceeds 250GW - 200 times the power produced in 2020 - with the first gigawatt-scale plant anticipated to fire up in 2028.

Increased legislation

As 2030 nears, clean and affordable energy targets are looming larger. Legislation from institutions like the UN, IRENA and government coalitions is putting pressure on organisations to transition to the green energy future.

In the US, 22 states plus Washington DC have set up enabling policies for community solar. The Biden administration has offered a solar investment tax credit, and private sector investment in renewables is expected to explode in 2023. We can expect to see government policies that directly shape the energy industry and its outcomes toward a greener future in most developed countries.

Partner collaboration

We are part of an energy ecosystem, and not one of us can meet 2030 targets, enable the energy transition, or establish domestic energy security alone. Take AI as an example. The technology exists to realise the potential role of this game-changing development, but AI-supporting business practices need to be adopted in order for this to happen.

The collaboration doesn't stop at business. On a different scale, we need engagement from consumers. DER, home battery storage, EVs and AI make consumers our partners in the energy transition - we need their buy-in. Partner collaboration was a strong theme of the 2022 Enlit conference in Europe, so we can expect a strong focus on collaboration in 2023 and beyond.

With war, energy scarcity, climate catastrophe and economic crisis all casting dark shadows around the globe, it can be hard to look positively on the macro environment of the energy industry as we approach 2023. But the interplay of these five factors - domestic resiliency, prosumer tech, the shift to renewables, increased legislation and partner collaboration - represents a tipping point for the global energy industry as we know it. We're on the brink of a cleaner, more cost-effective and more resilient energy future, and perhaps the climate we're in right now will serve as the catalyst.

For energy retailers, the role you play in this tricky, eternally disrupted landscape is vital. Your work shepherds consumers through the energy transition. The best thing you can do to keep ahead of the game and support the critical evolution of the industry is to digitise your systems now. Shall we collaborate?

Key features

- Advanced Data Management
- Credit Management
- Tariff Optimisation
- Payments
- Billing
- Service Management
- Compliance & Reporting
- Data Migration
- Fast, cost-effective innovation
- New Energy Innovation
- Customer Management
- Market Compliance

Quote to Contract
Prepare energy offers and generate contracts for complex C&I and multi-site deals, automatically triggering transfers and onboarding.

Utility Billing
This multi-utility platform can be used for C&I, residential, ENOs and distributed energy resources.

Customer Management
Simplify the operations experience with Tally Billing's intuitive customer management layer.

Exception Management
Automation and simplifying exception management makes a zero-touch future possible.

Data Lake
Quickly deploy our fully cloud based data lake to provide a platform for advanced analytics, machine learning and business intelligence.

Analytics
As experts in leveraging and analysing utility data, we've developed complex models for tariffs, churn, exceptions and new energy solutions.

Tariff Optimisation
Run ongoing bulk or one-off simulations to calculate your customers' best combination of network and retail tariffs.

New Energy Innovation
Our ability to bill any complex tariff structures mean we're supporting grid transformation and the move to a cleaner future.

Revenue Assurance
Bill reconciliation capability with real-time views of potential issues prevents revenue leakage.

Market Compliance
Our platform is designed to be fully compliant with the energy market.

Our billing platforms

“The team immediately mobilised additional resources and oversight to remediate a complex operational billing challenge with minimal business and customer impact.”

Stuart Rainsford
GM Energy, VOCUS GROUP

Lower cost to serve

Tally Digital allows your customers to manage their account, payments, explore insights and chat with virtual or personal support. It's available anytime, anywhere via our native mobile apps and online web portal.

Reduce churn

Customers receive personalised weekly updates between bills (preventing bill shock). In addition, customers have access to budget setting and alerting. Independent research* has shown our solution reduces churn by a third and consistently ranks NPS scores over 50.

Enable Upsell

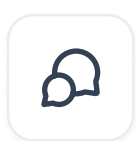

Leverage granular usage data to provide highly personalised insights and offers. When integrated with Tally Trust our emails comms have high click-through rates (40%-70%). There's also the capability to calculate personalised ROI for customers to upgrade their appliances, solar or battery.

Rich Data

Our machine learning analytics extract insights that enable a whole new energy customer experience. Run demand response programmes and capture important data on customer behaviour. As a retailer you'll have access to detailed data and customer insights via a reporting dashboard.

Our digital products

Energizing Innovation in Utility Technology and Energy Retail Operations

Digital Self Service (DSS)

Tally DSS is a modern suite of digital tools that allows end users to manage their account, payment, chat and explore insights. Tally DSS is fully integrated with chat capability for assistance and support. Available on web and mobile.

Trust

Tally TRUST reduces churn, boosts brand stickiness and can be deployed quickly. Reduce churn by up to 30% with weekly customer updates. Improve CX by helping people to manage usage and keep bills under control.

Behavioural demand response (BDR)

Tally BDR reduces load and saves your business money during peak events. Gain access to Tally Group's award-winning behavioural demand response platform, designed to make life easy for customers.

Load Disaggregation

Tally LDA provides weekly usage insights at the appliance category level for customers. Reduce cost to serve by giving customers personalised and actionable insights.

CANDI

Tally CANDI is a flexible admin interface for C&I customers to analyse usage, forecasting, invoices and manage users. CANDI supports complex products that require flexibility, billing solutions and settlement engines.

*Trust's effectiveness as reported by the Melbourne Uni Centre for Market Design

The Tally Solution

Packed with features

Tally DSS is a modern suite of digital tools to manage the customer experience. It allows end users to manage their account, payment, chat and explore insights. Tally DSS is fully integrated with chat capability for assistance and support. And everything else you'd expect including managing bills, payments, viewing usage, solar generation and tracking spend.

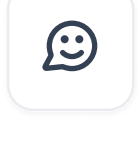

Lower cost to serve

Tally DSS allows your customers to manage their account, payments, explore insights and chat with virtual or personal support. It's available anytime, anywhere via our native mobile apps and online web portal.

Enjoy Flexibility

Tally DSS integrates with any of Tally's billing systems or with your own via APIs. Our platform is ever evolving with the ability to purchase additional modules as they come online. You'll also have the flexibility to plug-in 3rd party services such as your own chat engine, EV monitoring or use our in-house experts to build custom modules to gain a competitive edge (e.g. e-commerce, rewards, campaigns).

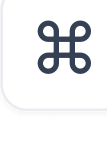

Reduce Churn

Customers receive personalised weekly updates between bills (preventing bill shock). In addition, customers have access to budget setting and alerting. Independent research* has shown our solution reduces churn by a third and consistently ranks NPS scores over 50.

Rich data

Our machine learning analytics extract insights that enable a whole new energy customer experience. Run demand response programmes and capture important data on customer behaviour. As a retailer you'll have access to detailed data and customer insights via a reporting dashboard.

Enable upsell

Leverage granular usage data to provide highly personalised insights and offers. When integrated with Tally Trust, our email comms have high click-through rates (40%-70%). There's also the capability to calculate personalised ROI for customers to upgrade their appliances, solar or battery.

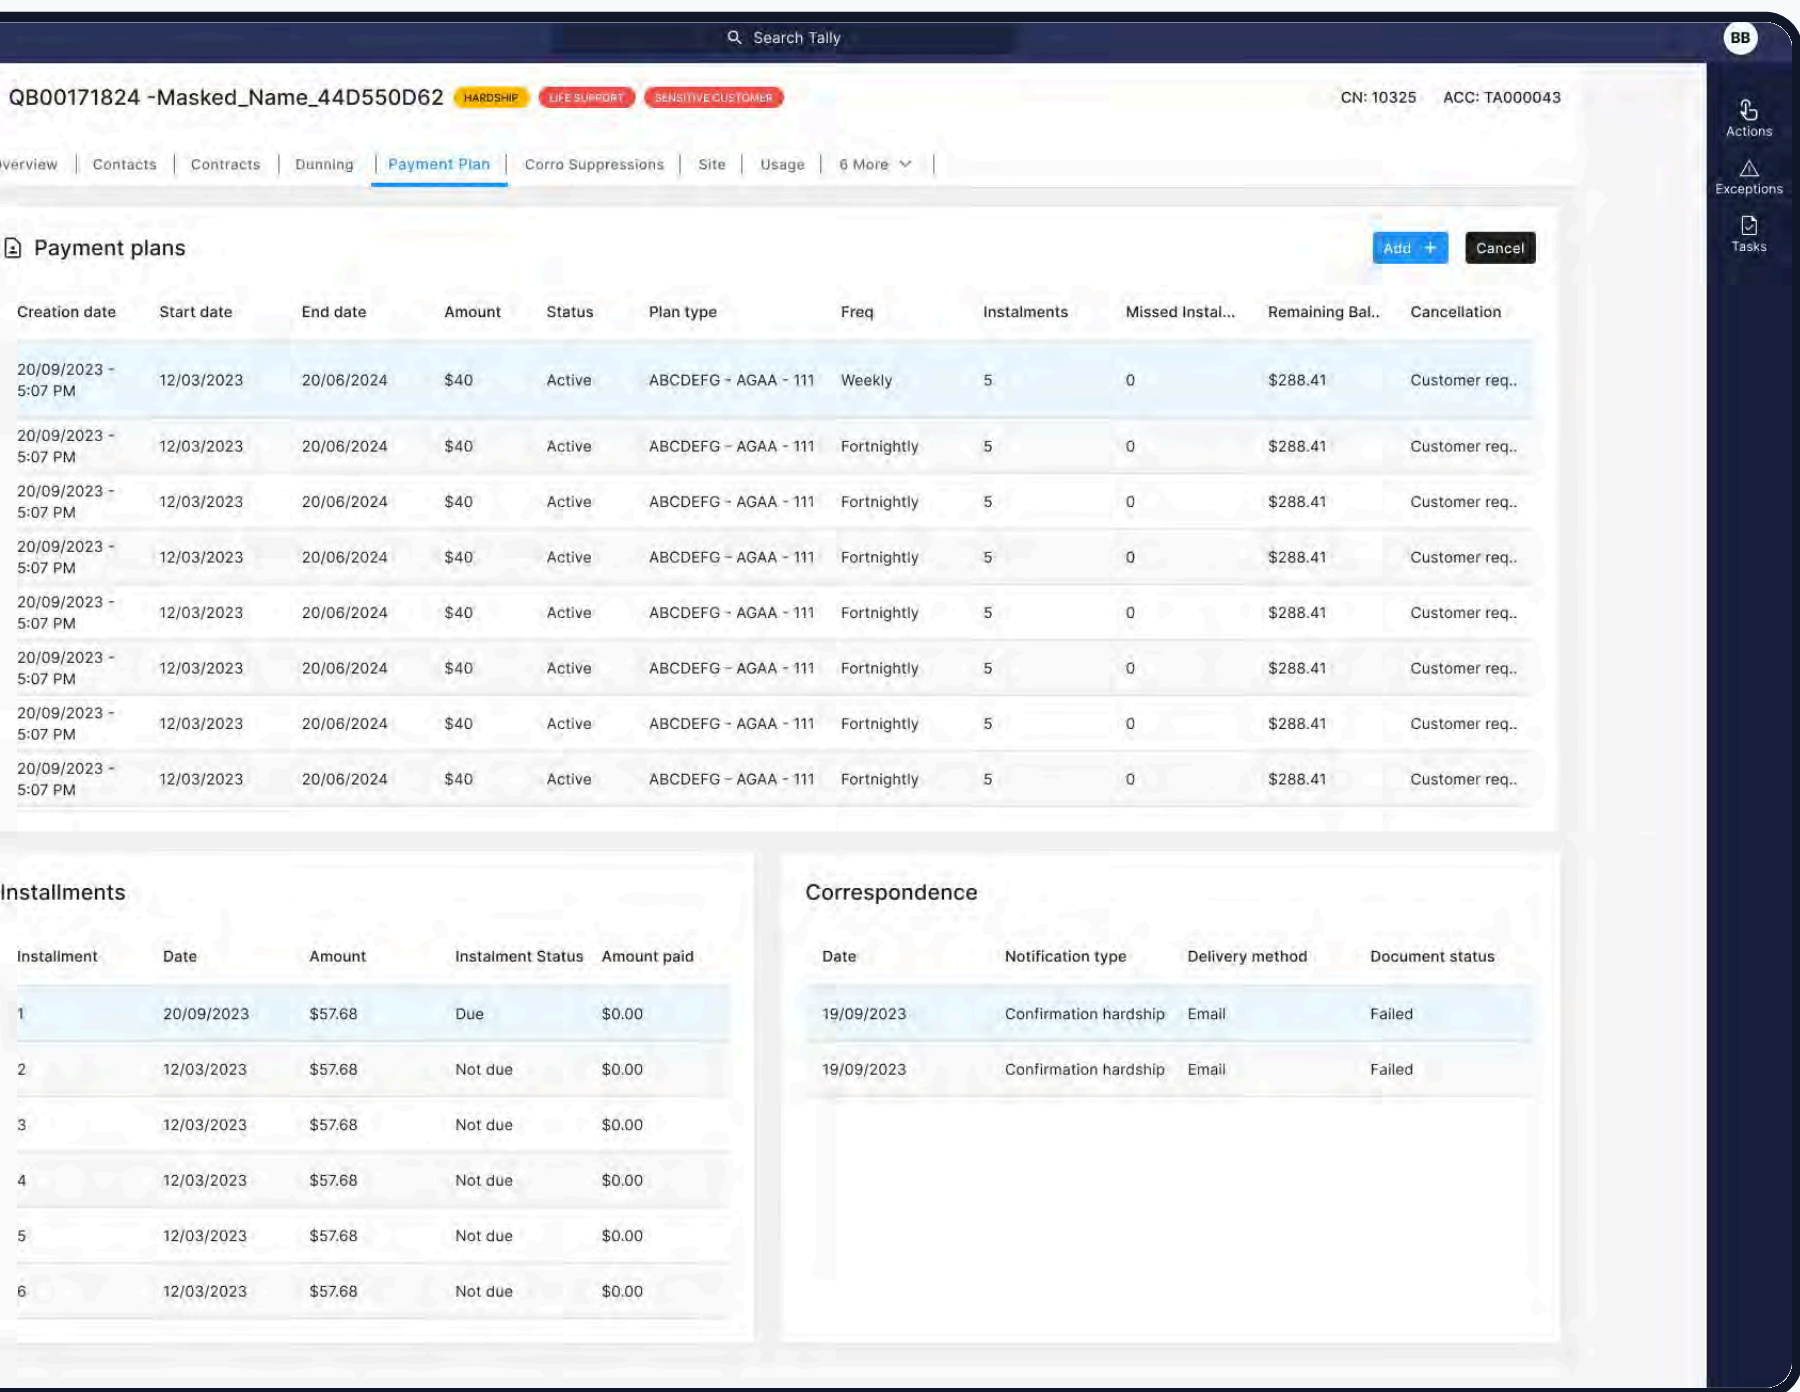

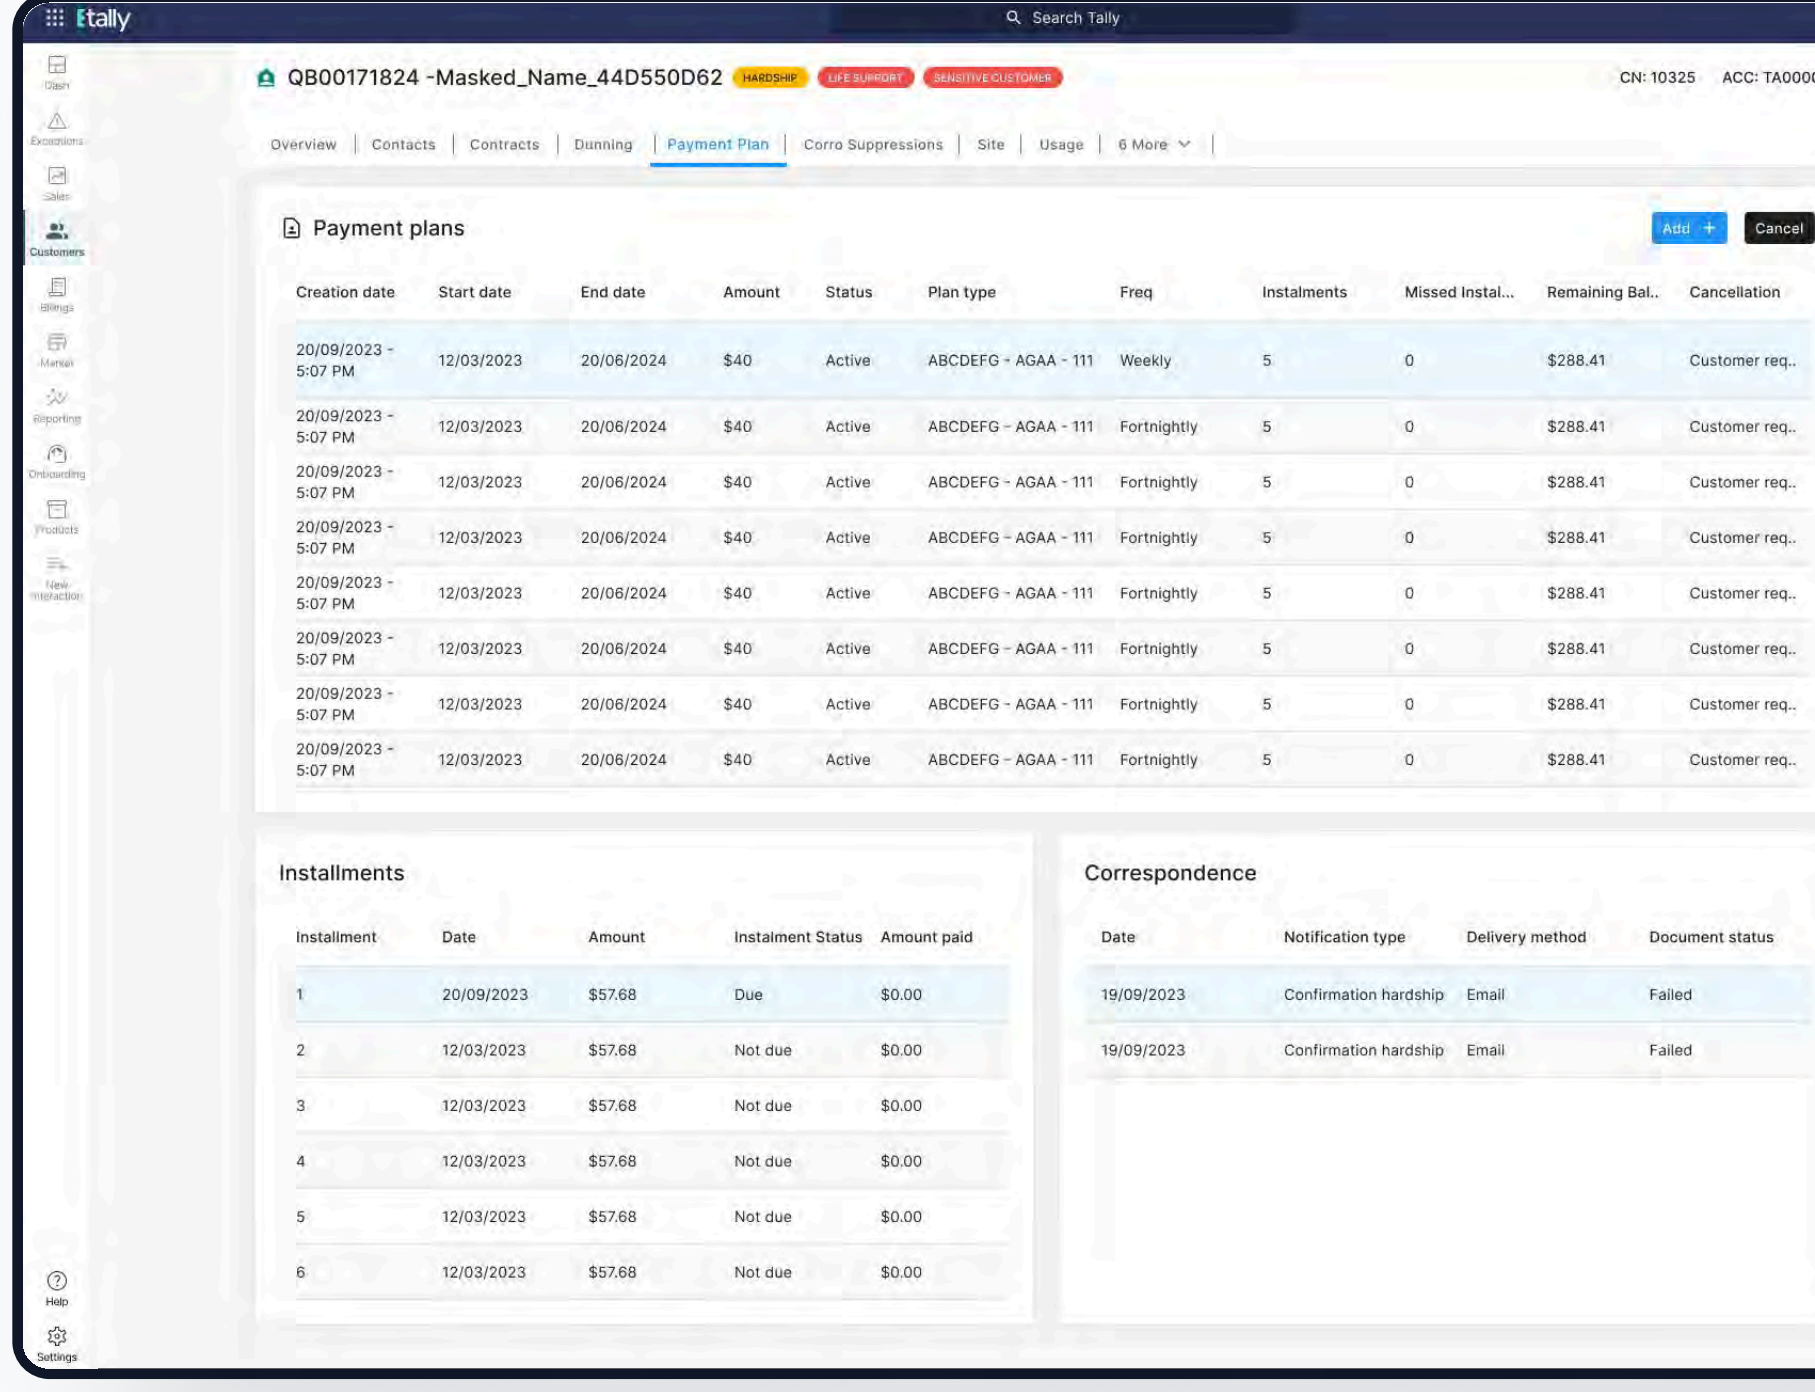

How will Tally DSS be good for my business?

An engaged customer base that self-serves digitally.

Put customers in control

Digital self-service gives customers more power, choice and convenience.

- ✓ Help customer's understand their energy usage and influence their behaviour to save money and their CO₂ footprint.
- ✓ Allow customers to self-serve their energy account in a user-friendly, highly-personalised way.
- ✓ Customers with Solar PV / Community Batteries can monitor their generation without leaving the app.

Lower cost to serve

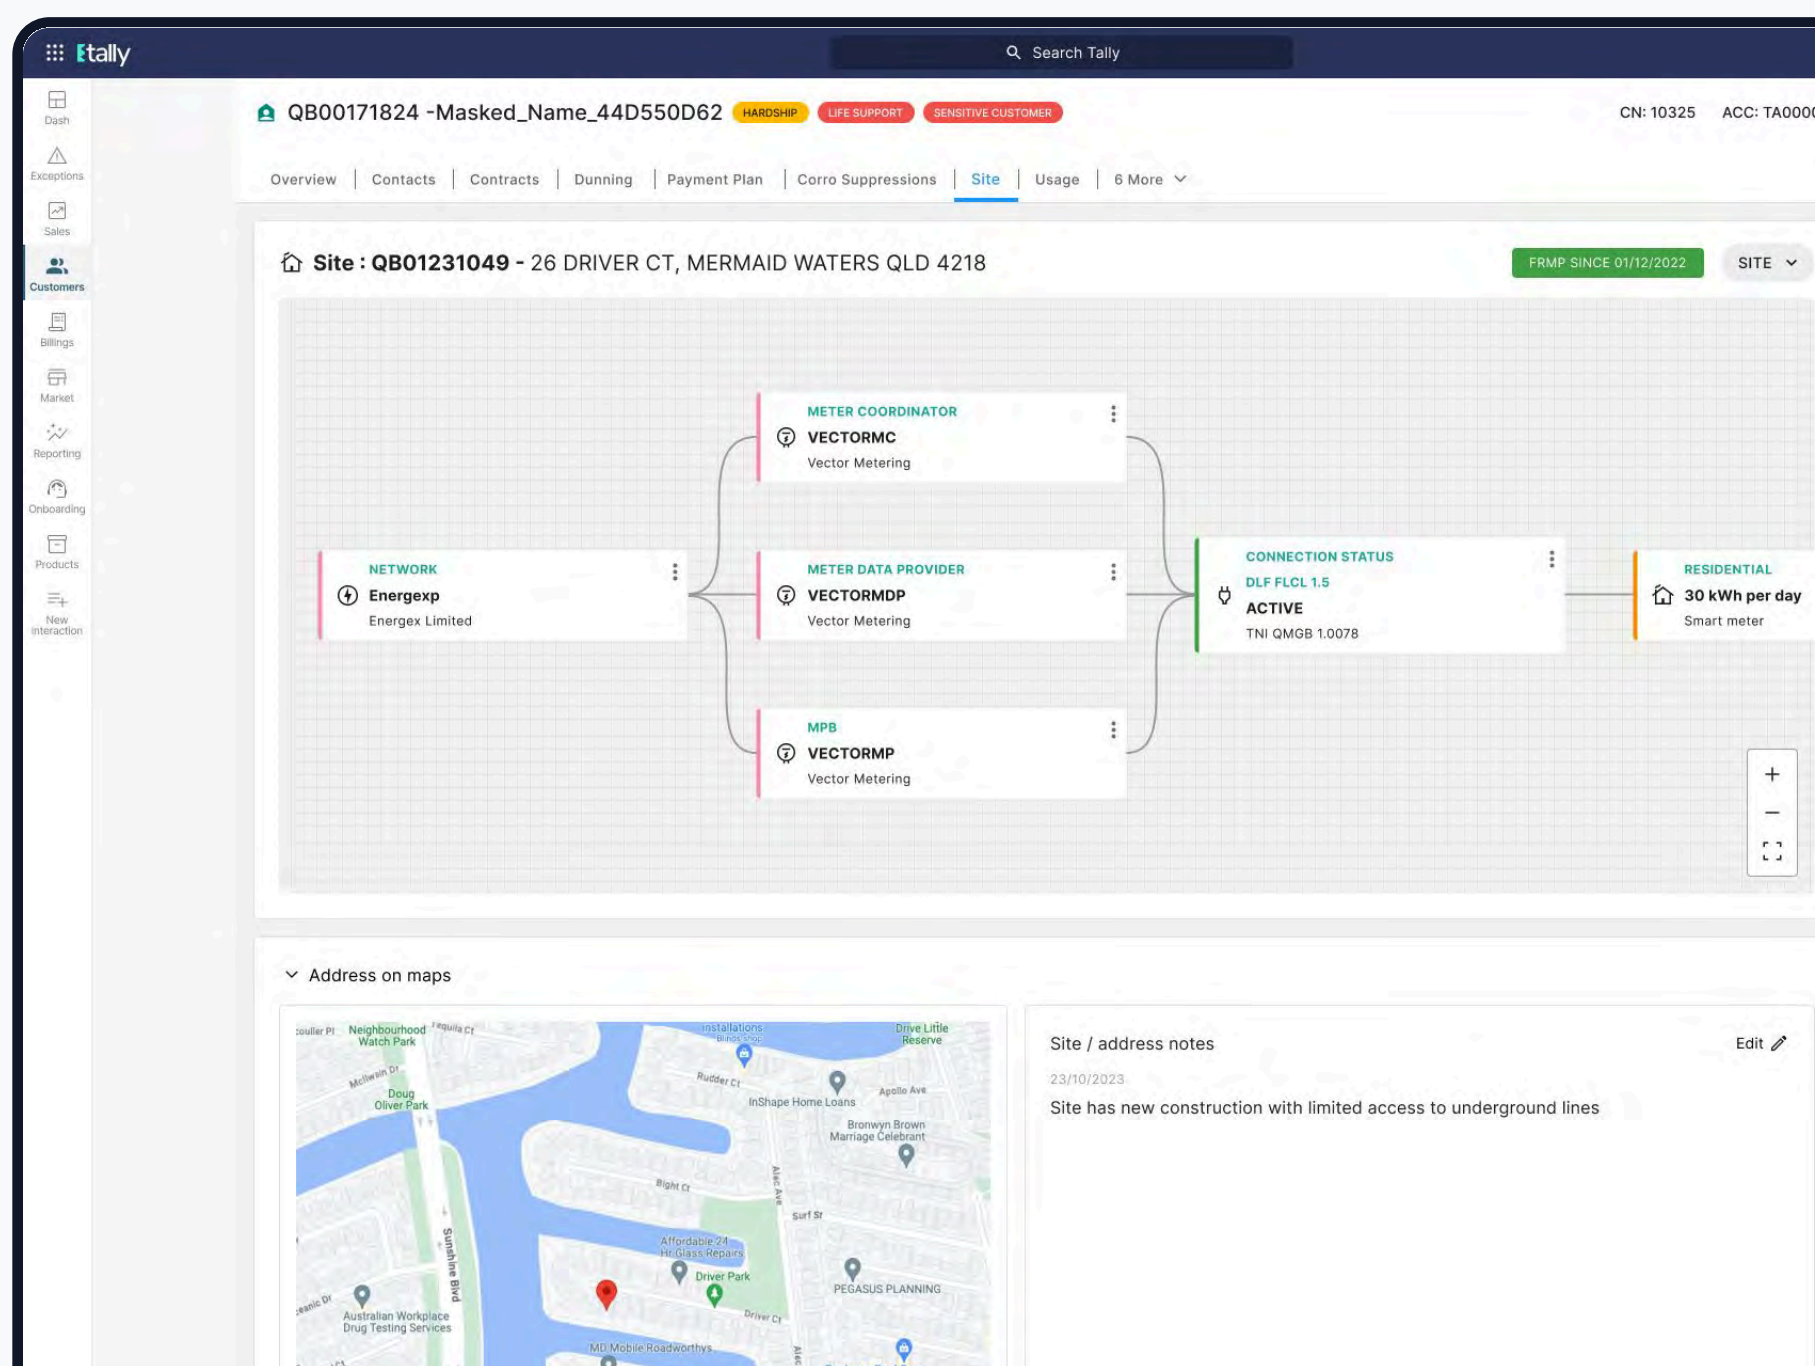

Reduce cost to serve by giving your customers actionable insights.

- ✓ Provide 'just in time' insights that allow customers to take action on their own.
- ✓ Reduce enquires to your contact centre.
- ✓ Enable customers to order new products and services via self service. Add-on Tally Trust to leverage weekly data to target customers with highly personalised insights and offers

Stay fresh and reduce churn

Tally's integrated digital platform gives you access to other Tally products and features including Trust, Load Disaggregation and Behavioural Demand Response.

- ✓ Low-friction integration.
- ✓ Works with legacy infrastructure.
- ✓ Tally DSS is an ever-evolving product that moves with the times.

UconX

Accelerate your energy sales pipeline - improve your customer experience

Tally Acquire is a cloud-native app developed with and for energy, gas and internet retailers that enables you to set up sales channels in minutes.

Pricing and product management

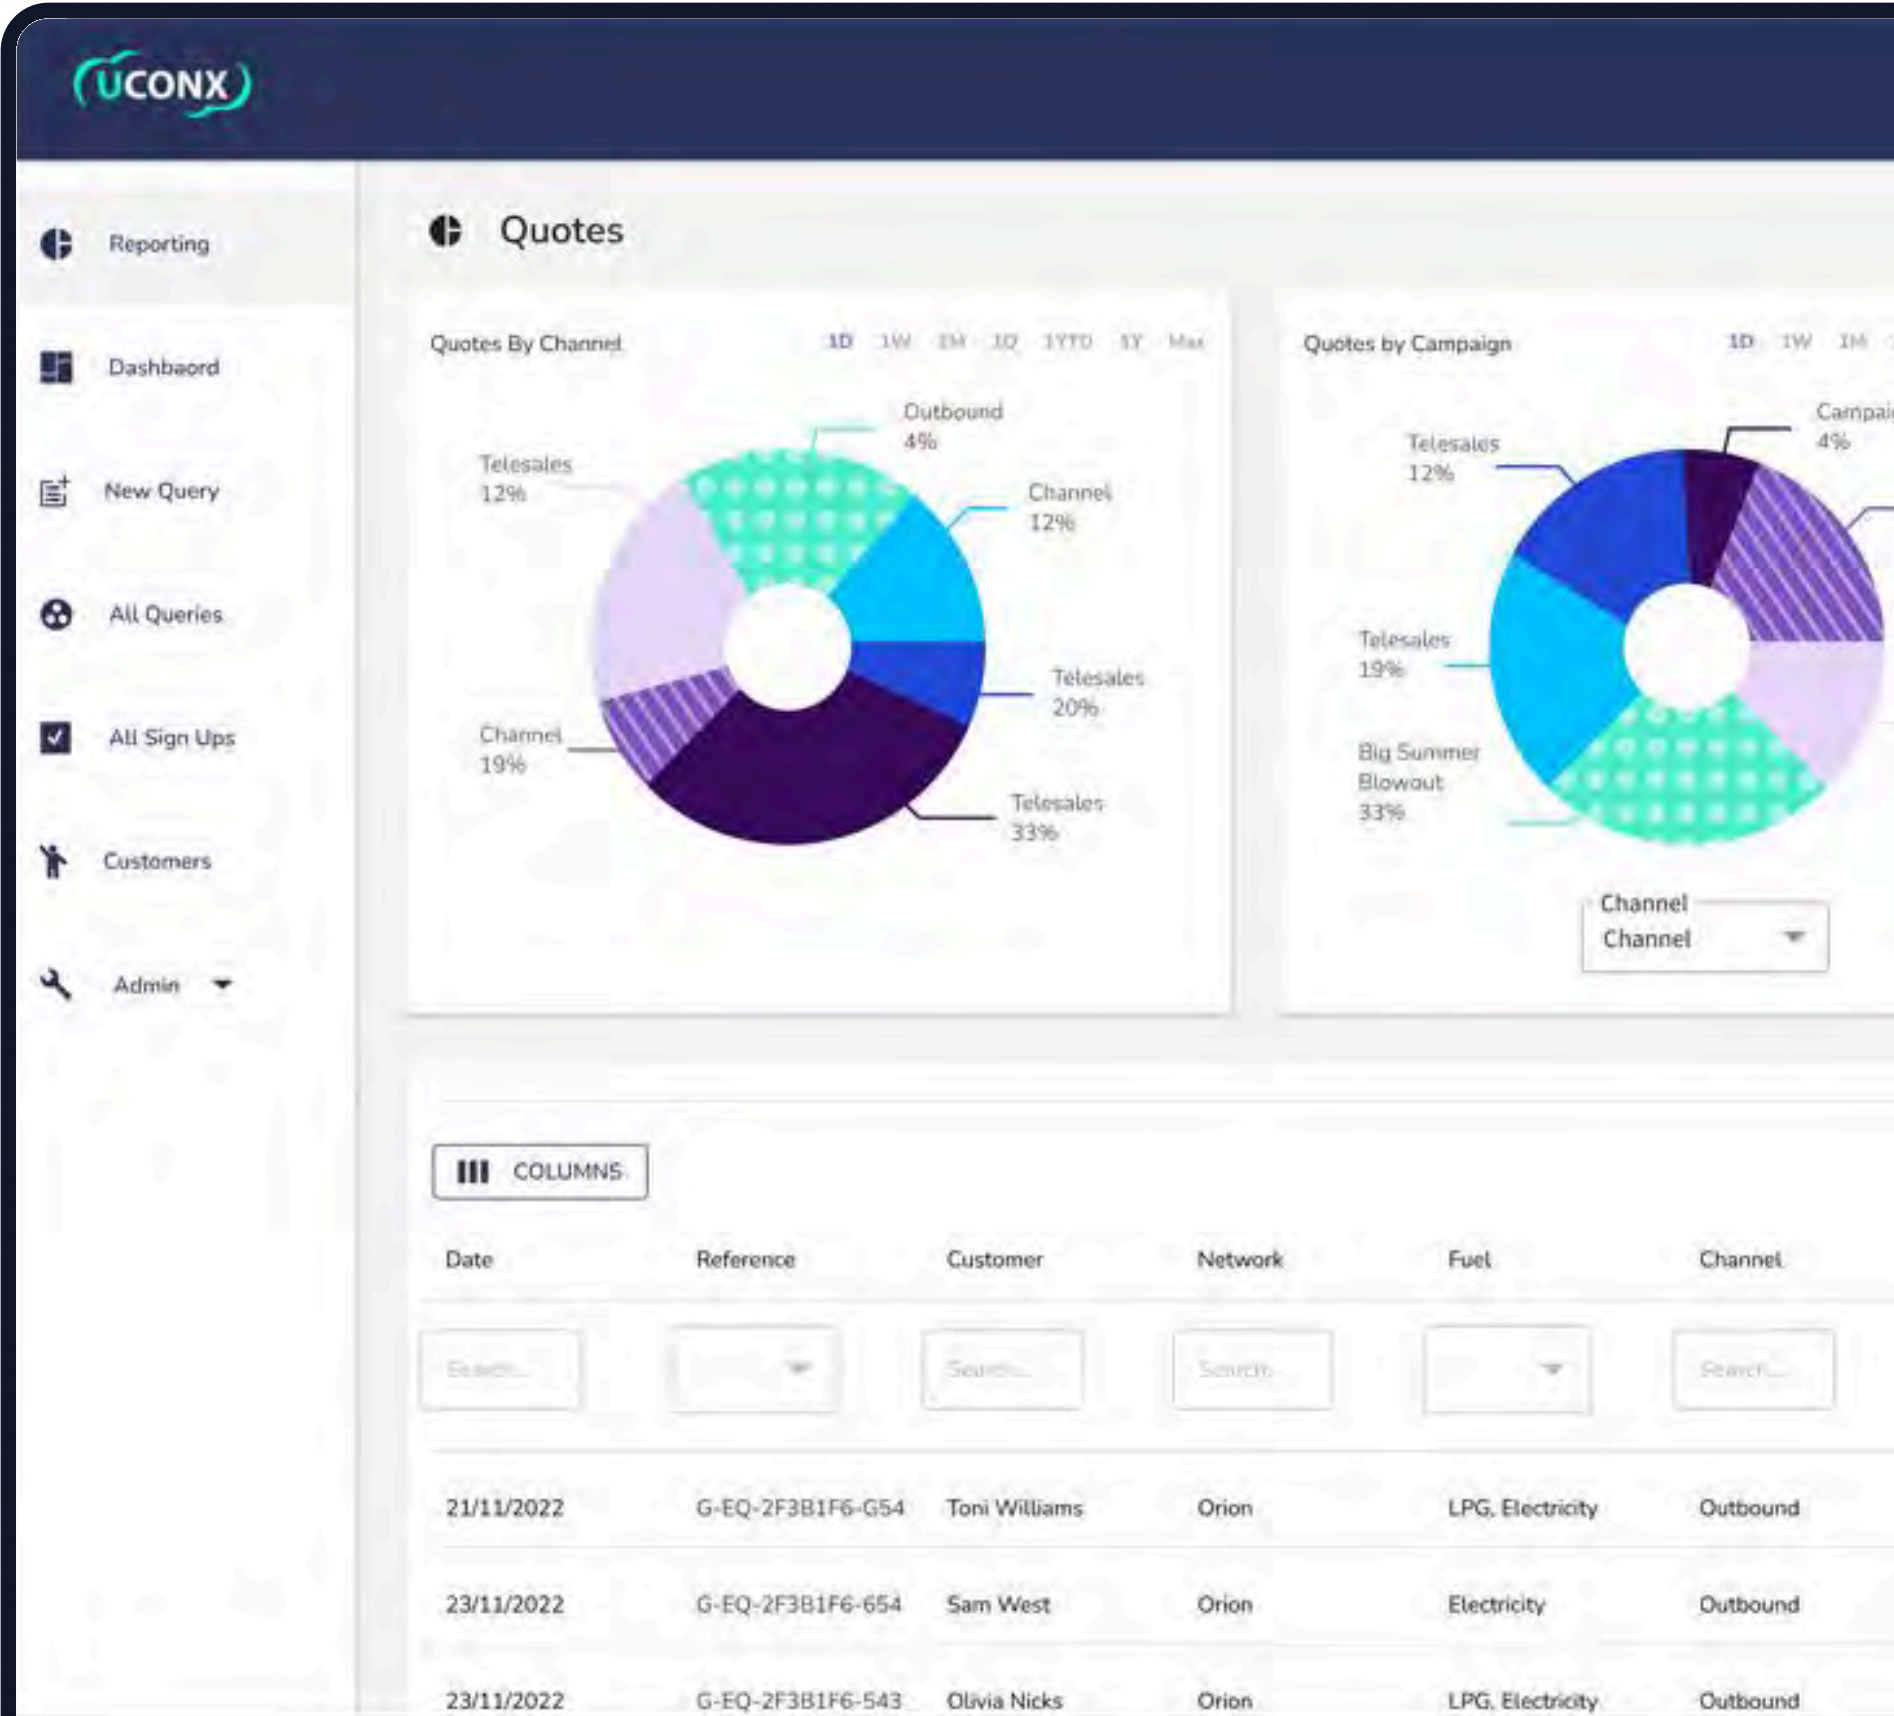

Easy management of offers and rates, with the ability to import and export pricing. Store and manage historic, current and future pricing and offers. Manage sign-up offers and incentives available to different agents or channels. Generate reports to analyse pricing and sales conversions by channel, date, and distributor. Full integration with billing systems, CRM, and Data Warehouse.

Sales conversion

Tally Acquire integrates with your website to provide self-service comparative quoting functionality to your customers. Track leads from agent and web channels with a Performance Dashboard and online reporting tools. Fast, accurate quoting using MSATS and data validation integration. Calculate commission payments for third party sales agents.

Compliance and security

Automatic feed of price change and compliance information to regulators. Centralised product, pricing, quoting and onboarding communication. Advanced security protects client and customer data.

Accurate quoting

Price-only and comparative quotes for electricity, gas, and internet for all potential customer sites within minutes. Add-on the Zappy Consumer Data Rights solution to allow customers to import their energy usage, NMI and billing information then compare offers against their current plan. Calculate a range of quoting considerations, including completing credit rating checks, address verification, hold products, and a variety of membership association benefits. Fast, accurate quoting using MSATS and data validation integration.

Smart documentation

Produce automated, customisable branded PDF quotes and Welcome Packs to send to your customers. Interactive PDFs include a click-through link for quote acceptance and switching process initiation.

System integration

Seamless sign-up enabled by integration with credit agency systems, billing systems and existing CRMs. Industry database integration ensures all quotes are accurate and site-specific. API powers self-quoting via your retail websites.

Reporting

Pricing and sales conversions analysis by channel, date and distributor. Real-time reports on quoting and sales processes. Track quoting volumes and conversion rates at every level.
